

# SOLANA PROPERTY<sup>AS</sup>

*- The great feeling -*

Calle Saule 41, Foya Blanca  
Specifications

## ENERGY CLASS: A

The energy classification is very important regarding reducing costs to heat in winter and cool the villa during summer. We have looked for, and chosen, solutions that could reduce the leakage of energy, and hence reduce the costs to run the villa. This is insulation in the roof, the walls, the floor, all bridges between inside and outside, windows and doors. The energy class is certified from an external company, and the certificate is a part in the Obra Major, authorized by the Notarius.

This means the villa will be nice and cool during the summer, and warm during the winter. Since the heating is in the floor, you will never feel the tile floor as uncomfortable.

## WATER PROOF ROOF:

The roof has been certified as "tett" by an external company. The requirement for a test is 24 hour with 10 cm water on the roof. Our entrepreneur, CanaryAlfaz, extended the test to a week. No leakages appeared. This certificate is also part of the Obra Major, authorized by Notarius.

## INTERIOR DETAILS:

### 1. Living and Dining Room

- a. Windows and patio doors: Low emission, extremely well insulated. Dark brown window frame, pwc. Large sliding doors that may open the living room towards the patio.
